

Towards the .NET Junior Developer

The extremely solid course

Towards the .NET Junior Developer

Lesson 11

Application UI development

Towards the .NET Junior Developer

Agenda

- [UI libraries and frameworks](#)
 - [Windows Forms](#)
 - [WPF](#)
 - [Xamarin.Forms](#)
 - [MAUI](#)
- [Blazor development basics](#)
 - [MVC pattern](#)
 - [Blazor Server project structure](#)
 - [wwwroot](#)
 - [Data](#)
 - [Pages](#)
 - [Shared](#)
 - [Layouts](#)
 - [Interaction with the backend](#)
- [Books of the day](#)
- [Links of the day](#)
- [Hometask](#)

UI libraries and frameworks

Windows Forms

The image displays the Visual Studio IDE interface for a Windows Forms application. The left pane shows the code for `Form1.cs` in the `HelloWorld` namespace. The middle pane shows the Toolbox with the `Button` control selected. The right pane shows the Design view of `Form1`, which contains a text box and a button labeled `Button1`.

```
1 using System;
2 using System.Windows.Forms;
3
4 namespace HelloWorld
5 {
6     public partial class Form1 : Form
7     {
8         public Form1()
9         {
10             InitializeComponent();
11         }
12
13         private void btnClickThis_Click(object sender, EventArgs e)
14         {
15             lblHelloWorld.Text = "Hello World!";
16         }
17     }
18 }
19
```

WPF – Windows Presentation Foundation

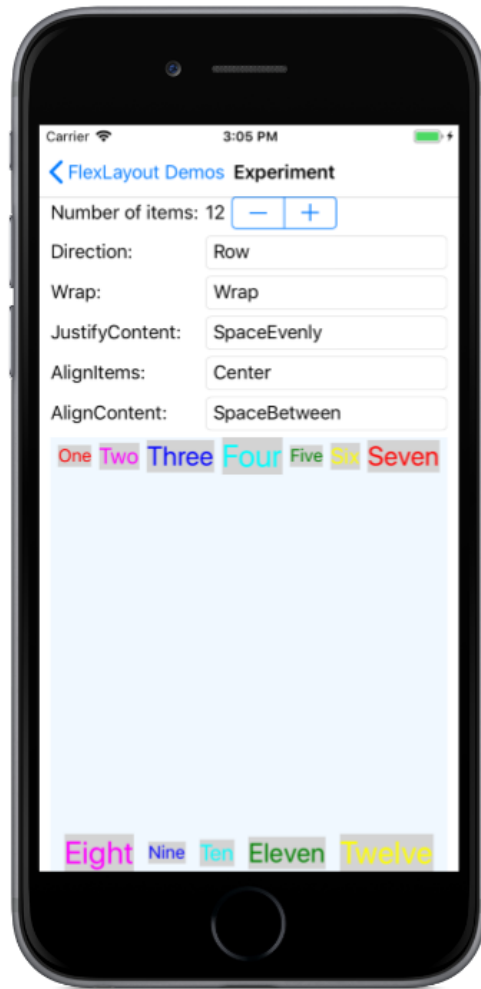

```
<DataTemplate>
<Ellipse Width="30" Height="30">
  <Ellipse.Resources>
    <Style TargetType="Ellipse">
      <Setter Property="Fill" Value="Transparent"/>
      <Style.Triggers>
        <DataTrigger Binding="{Binding State}" Value="-1">
          <Setter Property="Fill" Value="LightPink"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="0">
          <Setter Property="Fill" Value="LightBlue"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="1">
          <Setter Property="Fill" Value="Green"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="2">
          <Setter Property="Fill" Value="Azure"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="3">
          <Setter Property="Fill" Value="Red"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="4">
          <Setter Property="Fill" Value="RosyBrown"/>
        </DataTrigger>
        <DataTrigger Binding="{Binding State}" Value="5">
          <Setter Property="Fill" Value="SaddleBrown"/>
        </DataTrigger>
      </Style.Triggers>
    </Style>
  </Ellipse.Resources>
</Ellipse>
```

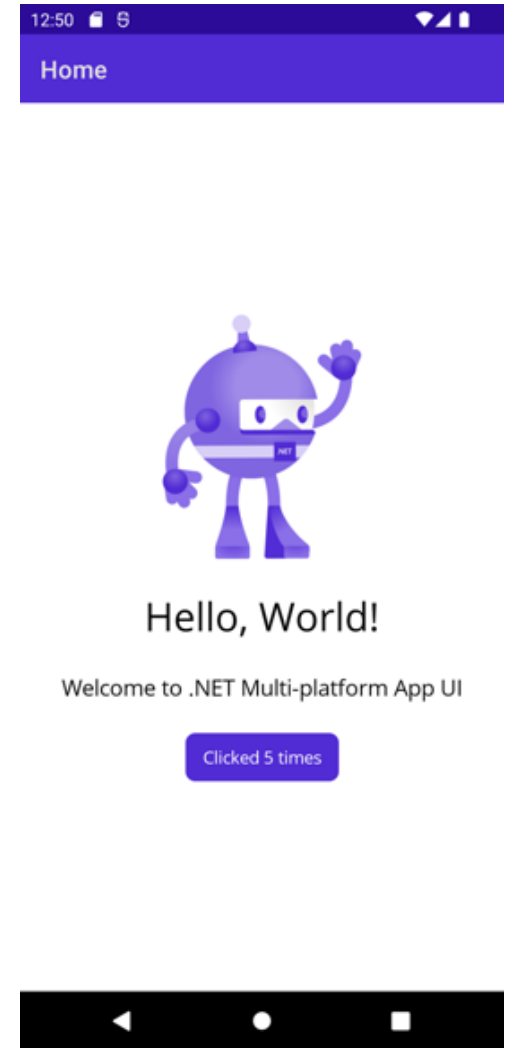

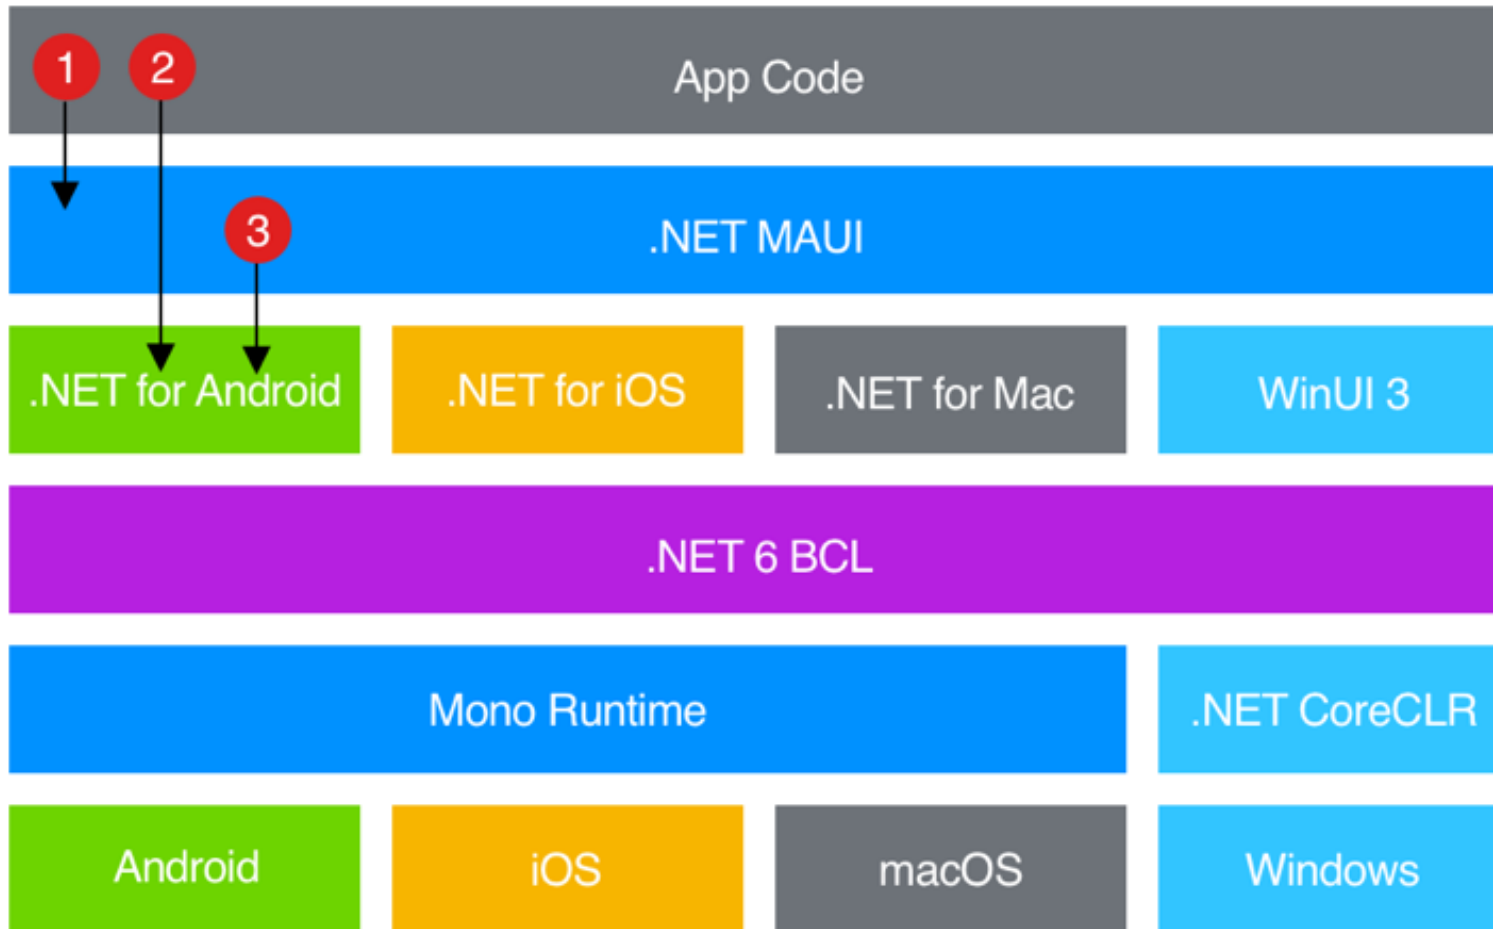

```
48 public class Data
49 {
50     1 reference
51     public int ID { get; set; }
52     1 reference
53     public ModeState State { get; set; }
54 }
55 2 references
56 public enum ModeState
57 {
58     NotDefine = -1,
59     Stop = 0,
60     Automatic = 1,
61     Wait = 2,
62     Error = 3,
63     Jam = 4,
64     Block = 5
65 }
```

Ellipse	ID	State	
	1	NotDefine	
	2	Stop	
	3	Automatic	
	4	Wait	
	5	Error	
	6	Jam	
	7	Block	

Xamarin.Forms

MAUI – Multi-platform Application UI

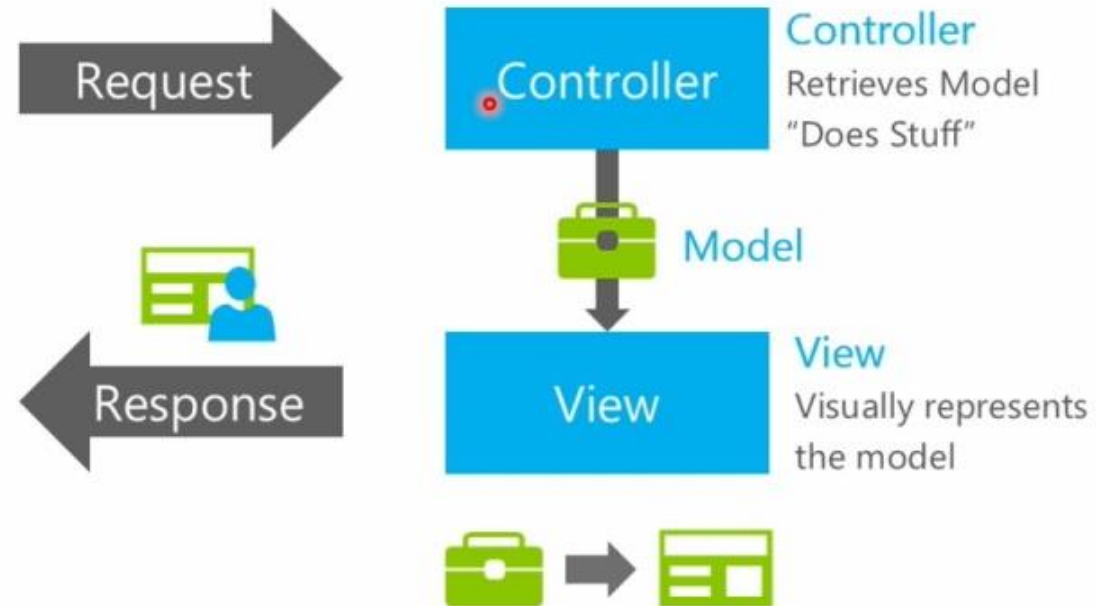

Blazor development basics

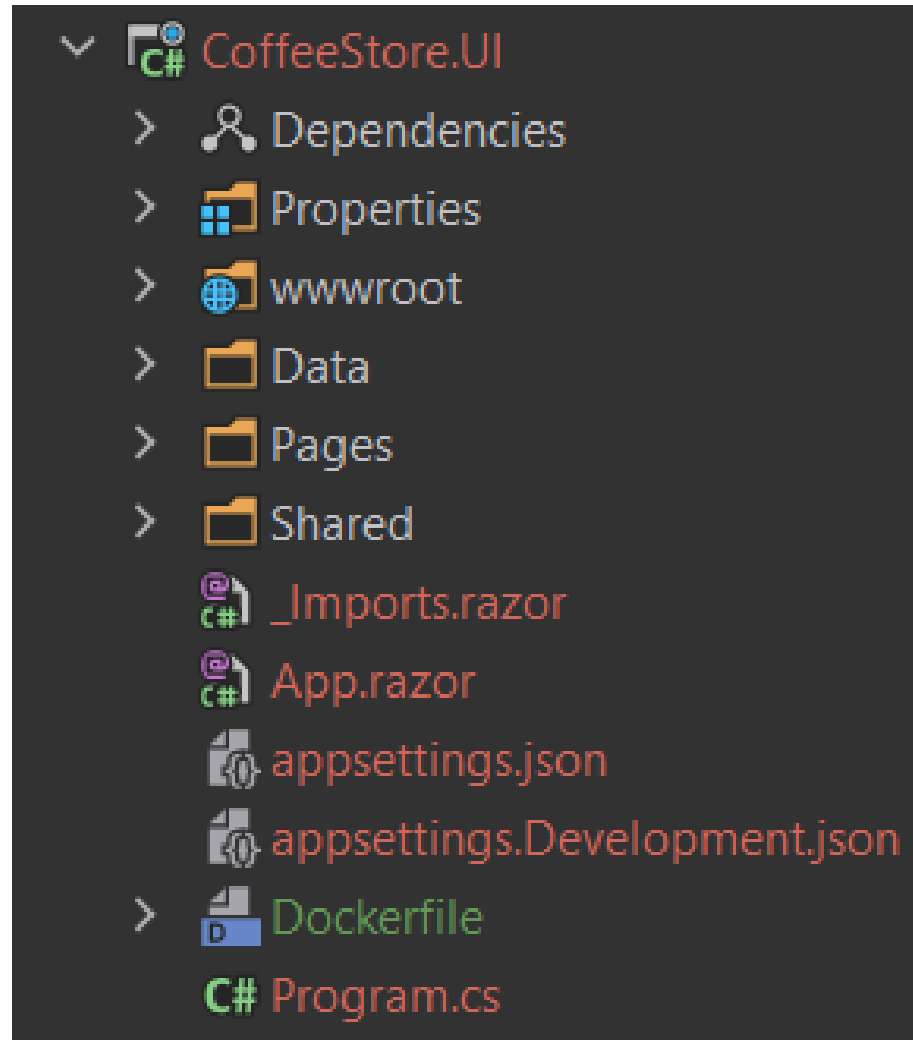

MVC pattern

Models, Views, and Controllers

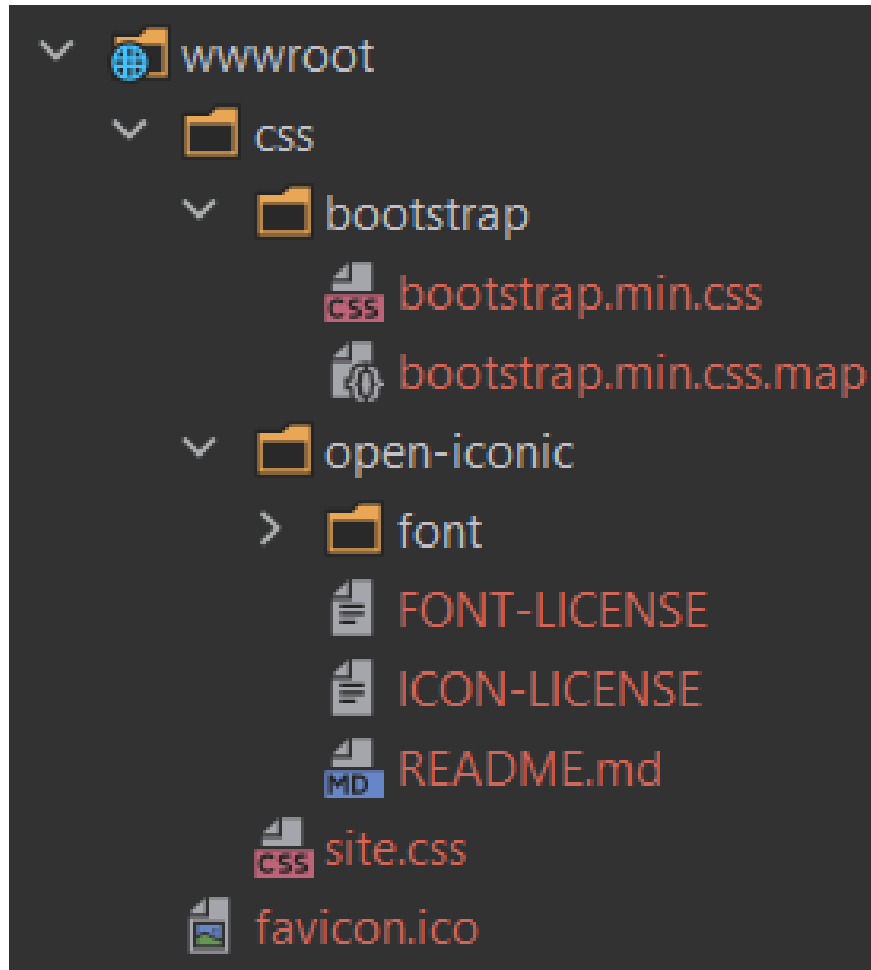

What does MVC look like?

Blazor Server project structure

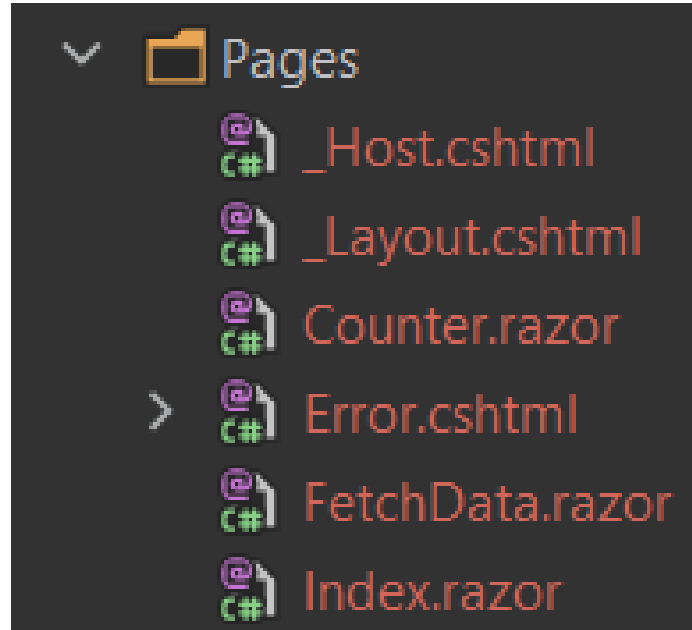

wwwroot

Data

Pages

Shared

Layouts

```
@inherits LayoutComponentBase

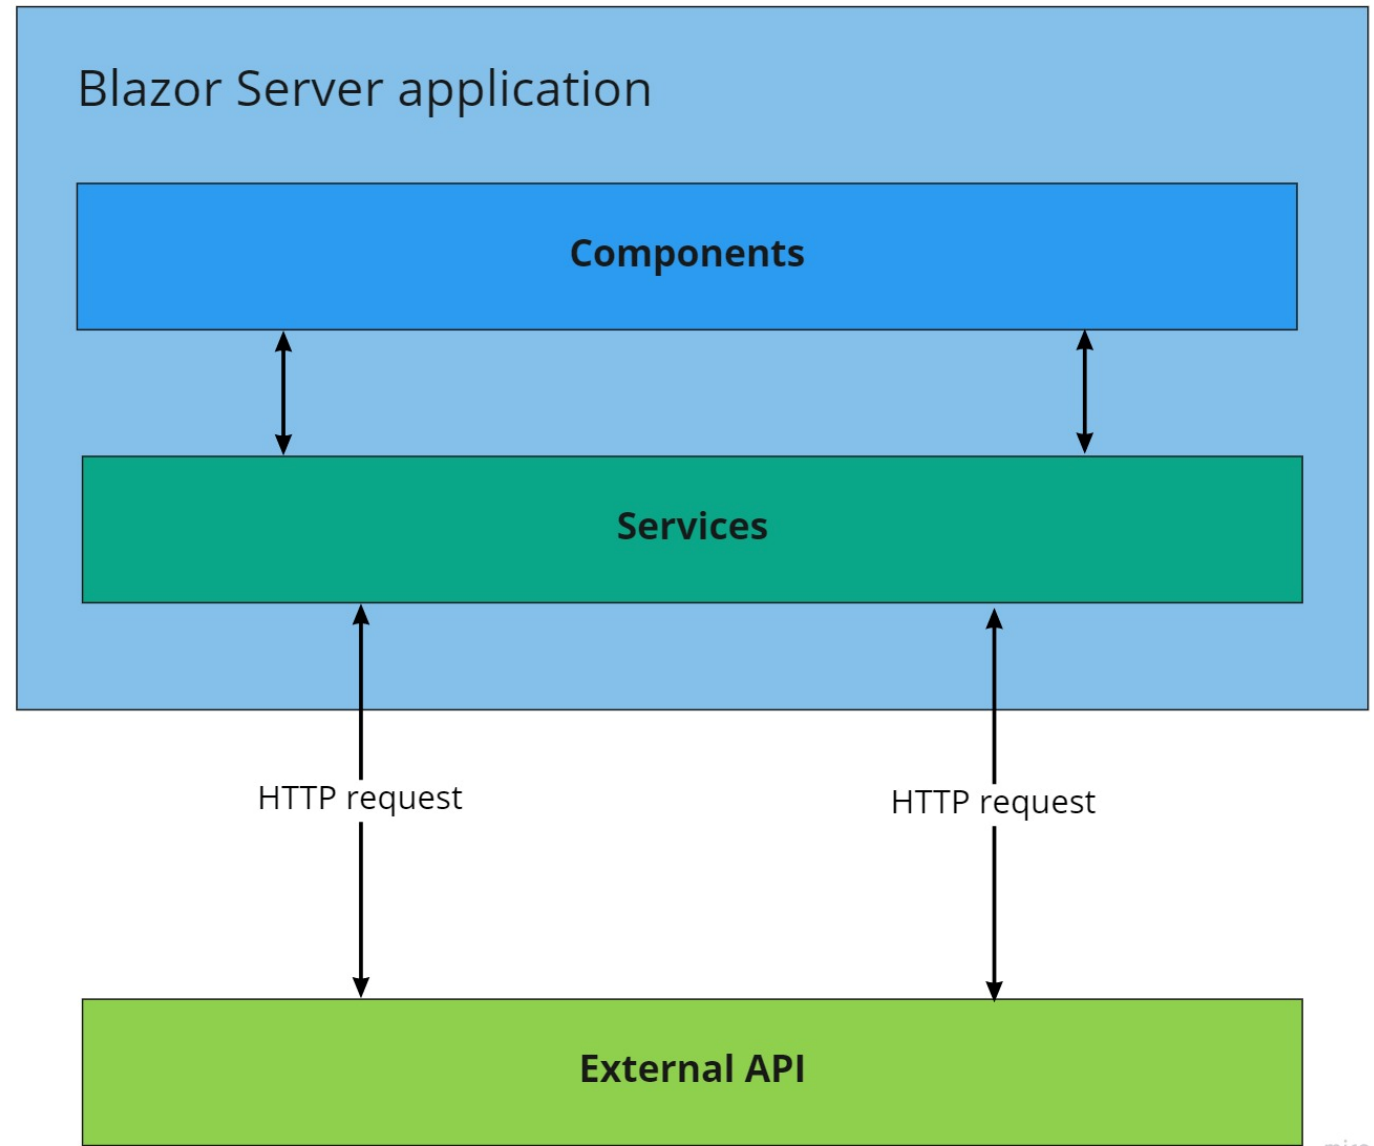

<PageTitle>CoffeeStore.UI</PageTitle>

<div class="page">
    <div class="sidebar">
        <NavMenu/>
    </div>

    <main>
        <div class="top-row px-4">
            <a href="https://docs.microsoft.com/aspnet/" target="_blank">About</a>
        </div>

        <article class="content px-4">
            @Body
        </article>
    </main>
</div>
```

Interaction with the backend
